

# Self Tracking Belt

## Maintenance

### Cleaning:

Whenever required, Self Tracking Belt can be cleaned with compressed air, spray nozzles or brushes. The grooves in pulleys and rollers can be cleaned using spring loaded scrapers.

### Preventative Maintenance:

Preventative maintenance consists of regular inspection of the belt:

- Check the joint of the belt for cable damage
- Check the sides of the belt for edge damage
- Check the grooves for accumulation of product
- Check the functioning of the support rollers
- Check the wear on the support strips
